

WHAT IS CLAIMED IS:

1. A device for a medical instrument, comprising an information tag connector adapted to couple with said medical instrument, said information tag connector further adapted to removably couple with at least one accessory.
2. The device of claim 1, wherein said accessory is selected from the group consisting of a spray bottle, a calculator, a watch, a storage container, and a writing instrument.
3. The device of claim 1, wherein said information tag connector is adapted to removably couple with said medical instrument.
4. The device of claim 1, wherein said information tag connector is adapted to removably couple with said at least one accessory.
5. The device of claim 1, wherein said information tag connector is further adapted to facilitate display of a message.
6. The device of claim 1, wherein said information tag connector is further adapted to facilitate display of an identifier for a user of said medical instrument.
7. A device for a medical instrument, comprising:
a first portion; and
a second portion hingeably coupled with said first portion, said first and second portions operable to cooperate with each other to form an instrument receiving slot for receiving at least a portion of said medical instrument, said first and second portions further operable to cooperate with each other to form an accessory receiving slot for receiving at least one accessory.

8. The device of claim 7, wherein said device is operable to be removably coupled with said medical instrument and said at least one accessory is operable to be removably coupled with said device.

9. The device of claim 7, wherein said first portion comprises an information tag portion for displaying at least one of a message and an identifier of a user of said medical instrument.

10. The device of claim 7, wherein said first portion comprises an information tag portion comprising:

a first surface for displaying a message; and

a second surface opposite said first surface for displaying an identifier of a user of said medical instrument.

11. The device of claim 9, wherein said first portion further comprises at least one flange coupled to said information tag portion, said at least one flange pivotally coupled to said second portion.

12. The device of claim 7, wherein said first portion comprises at least one flange pivotally coupled to said second portion, wherein an end of said at least one flange is adapted to form at least a portion of said accessory receiving slot.

13. The device of claim 9, wherein said first portion further comprises at least one locking hook extending outwardly from a surface of said first portion, said at least one locking hook operable to engage with a locking hole of said second portion to position said device in a locked position.

14. The device of claim 7, wherein said second portion comprises a locking portion adapted to lock with said first portion.

15. The device of claim 14, wherein said second portion further comprises at least one flange coupled to said locking portion, said at least one flange pivotally coupled to said first portion.

16. The device of claim 7, wherein said second portion comprises at least one flange pivotally coupled to said first portion, wherein an end of said at least one flange is adapted to form at least a portion of said accessory receiving slot.

17. The device of claim 14, wherein said second portion further comprises at least one locking hole in said locking portion, said at least one locking hole operable to engage with at least one locking hook of said first portion to position said device in a locked position.

18. The device of claim 7, wherein said first portion comprises at least one flange pivotally coupled to said second portion, wherein an inner surface of said at least one flange is adapted to form at least a portion of said instrument receiving slot and an end of said at least one flange is adapted to form at least a portion of said accessory receiving slot.

19. The device of claim 18, wherein said second portion comprises at least one flange pivotally coupled to said first portion, wherein an inner surface of said at least one flange of said second portion cooperates with said inner surface of said at least one flange of said first portion to form at least a portion of said instrument receiving slot.

20. The device of claim 19, wherein an end of said at least one flange of said second portion cooperates with said end of said at least one flange of said first portion to form at least a portion of said accessory receiving slot.

21. The device of claim 7, wherein said at least one accessory comprises a disinfectant spray bottle.

22. An instrument disinfecting system, comprising:
a medical instrument; and
an information tag connector removably coupled to said medical instrument, said information tag connector adapted to removably couple with at least one accessory.
23. The system of claim 22, wherein said information tag connector is adapted to facilitate display of information identifying a user of said medical instrument.
24. The system of claim 22, wherein said at least one accessory comprises a disinfectant spray bottle, wherein said disinfectant spray bottle is removably coupled to said information tag connector.
25. The system of claim 24, wherein said information tag connector comprises an information tag portion for displaying at least one of a message and an identifier of a user of said medical instrument.
26. The system of claim 25, wherein said information tag portion and said at least one accessory are on opposite sides of said medical instrument.
